Story Overview:

Before the fourth day there was a type of light but on this day God created the sun to give a bright light that was called day. He also created the stars and moon that we see in the night sky. Because of this there could be seasons and time as we know it today.

[How to Teach This Lesson as Part of a Creation Unit or Theme](#)

Background Study:

We only have to look into the night sky filled with stars to feel the majesty of God. When we know that each of the stars we see can be as big as our own sun it boggles the mind! Scientists believe that the Milky Way is 625,000 billion miles (a million billion kilometres) across. Try putting zeroes on that number!

We have a difficult time comprehending that God created not only our world but also the great universe. Scientists are trying to determine what exactly is in our universe. They are working hard to find other forms of life and ways

to encourage life on the moon. Although space exploration does answer numerous questions, many more remain unanswered.

Isn't it amazing how Earth is just the right distance from the sun so that we receive enough light and heat? If Earth were any closer, the heat would be so extreme that fiery destruction would be inevitable. Isn't it amazing that Earth and the moon have orbit paths that ensure we do not collide with one another or the sun? Isn't it amazing that Earth is the only planet that has just the right amount of oxygen for plant and animal life? God did have a plan for our existence. He made a universe that complements each aspect. Who else but a living God could have created such a marvellous masterpiece?

Children in your classes will have been or will be exposed to a number of scientific theories as to how the universe came into existence. The creation of the world cannot be recreated in a scientific experiment. Scientists can only make guesses (theories) about how they think that it all came about. It is interesting and good to want to learn about the creation. It is sad that many scientists ignore the One whose creation they are studying.

What else does the Bible have to say about the Sun, Moon and Stars?

- The heavens and skies tell the story of God ([Psalm 19:1-2](#))
- As magnificent as the sun, moon and stars are, we are never to worship them. Instead, we are to worship the One who made them. ([Deuteronomy 4:19](#))
- God gives good to us just as the sunshine brings good things our way. ([Psalm 84:11](#))
- God's creation of the stars is beyond our comprehension. ([Job 9:9-10](#))
- There is no limit to God's knowledge. He knows every star by name. ([Psalm 147:4-5](#))
- As Christians, we can shine like stars in our dark world of sin. ([Philippians 2:14-16](#))

Way to Introduce the Story:

Bring pictures of the night sky to class. Talk about the different constellations. Ask the children if they have seen any of these. Also talk about the different phases of the moon (full, crescent, etc.) "In today's lesson we are going to learn about the day when God made the sun, moon, and the stars.

[top](#)

The Story:

God made all of the plants on the third day of creation. But of course God did not stop on the third day. Who knows one very important thing that all plants need to have to survive? (Let the children answer until they say the sun.) That's right! If plants do not have sunlight then they will die. On the fourth day of creation God made the sun. Let's think of as many words as we can that have to do with the sun: (light, bright, burn, heat, warmth, UV

rays, sunrise, sunset, dawn, dusk, orbit, gasses, eclipse . . .). Let the children name and discuss as many as possible. God knew that the earth would need the sun to survive.

For the night sky God made the moon and stars. Let's name as many words as possible about the moon (shine, reflect, eclipse, craters, Apollo flights, gravity, orbit, rocks, full moon, crescent moon . . .). How about the stars? (Bright, twinkle, suns, planets, distance, gasses . . .)

(For older Children) When God made the sun, moon, and the stars on the fourth day, the management of time and seasons began. When the earth spins one time it is a twenty-four hour "day". When it orbits (goes around) the sun one time that makes one year. The nine planets that orbit our sun make up our solar system. There are many solar systems in the universe.

Some people say that the sun, moon, stars, and even our earth happened by accident. They do not believe that God created our world. They do not believe God's word—the bible. Sometimes people try to guess how the world was made. When they think that it may have happened a certain way they call what they think a theory. One theory is that the universe began because of a big explosion (that's called the "big-bang" theory). Others say that God did not create and order the earth, things just slowly changed (evolved) on their own by accident (that's called the theory of evolution).

We know that the word of God is true! We can read Genesis 1:1 "In the beginning God created the heavens and the earth" and John 1:3 "Through Him all things were made; without Him nothing was made that has been made" and know that God made the sun, moon, stars, and everything else in the universe!

Ways to Tell the Story:

This story can be told using a variety of methods. Always remain true to the facts found in the Bible but help children connect to its meaning by using drama, visual aids, voice inflection, student interaction and/or emotion.

Each teacher is unique so only use the illustrations that best relate to the way YOU are telling the story in THIS lesson. Too many illustrations can be confusing so eliminate any that cover other stories or details you do not wish to emphasize in this lesson.

Visual Aids that Cover All Seven Days of Creation

If teaching [the story of the creation as a unit](#) over a few weeks or days then repeat the whole creation story each time and follow this by going back and emphasizing more details about a particular day. [Try using a variety of story telling and visual aid methods](#). Although there will be a repetition of the creation story, you will be going a little deeper on this particular day, "Day 4". By the end of Day 7 all of the children will remember the story really well.

Review Questions:

1. What did God create on the fourth day? Sun, moon, and stars.
2. What is a theory? A possible explanation or guess about something. A theory has not been proven.

Song Suggestions:

- [Creation Song](#) (Emphasis on Day Four Part)
- [Hippo Song](#)
- [My God is So Big Song](#)
- [Got the Whole World in His Hands Song](#)
- Refer to the [Song Page](#) on this website for more options.

Learning Activities and Crafts:

[\(How to choose the best learning activities for my teaching situation\)](#)

Activities:

- Do some science experiments concerning astronomy or the sun.
- Make sun and moon sandwiches by using a slice of cheese and white bread. Put the two together and, using a round cookie cutter, let your students cut out a sun and moon.
- Bring a book about astronomy to class. Learn about some constellations.
- Arrange to go star gazing one night as a class get together. Look through a telescope if possible.

Crafts:

- Use silver glitter on black paper to make stars. If available, use glow-in-the-dark paper stars. [Click here for printable labels.](#)
- Creation Mural: Attach a long strip of paper to the wall and divide it into 7 sections for the days or creation. As the children study each day of creation glue items or paint pictures onto the corresponding section of the mural. For today's lesson add star stickers and sun and moon paper cut-outs.
